ABSTRACT

Until now, there has been no record of *Rhynocoris rubrogularis* (Horváth, 1880) in Turkey. The specimen was collected from Ordu province.

Key words: *Rhynocoris rubrogularis*, new record, Turkey.

INTRODUCTION

In 1997, one female has been collected from Ordu province, in the northwestern part of the Black Sea region of Turkey. This specimen is identified as *Rhynocoris rubrogularis* (Horváth, 1880) (Figs. 1, 2).

This specimen was collected in the southwest of Ordu Province, on a slope of the Canik Mountains range, close to the Blacksea coast.

Another species of this genus, *R. annulatus* (Linne, 1758) has been given previously as a new record in 1991 (Kiyak & Çağlar, 1991), from Rize province, in the Eastern Blacksea region of Turkey.

Material examined:

Ordu, Çamas, Dumandag, 1 ♀, 22.5.1997, ca.600 m.(leg. A. SALUR).
